

Worry and experience of harm from everyday risks

Worry + country value
Experience + country value

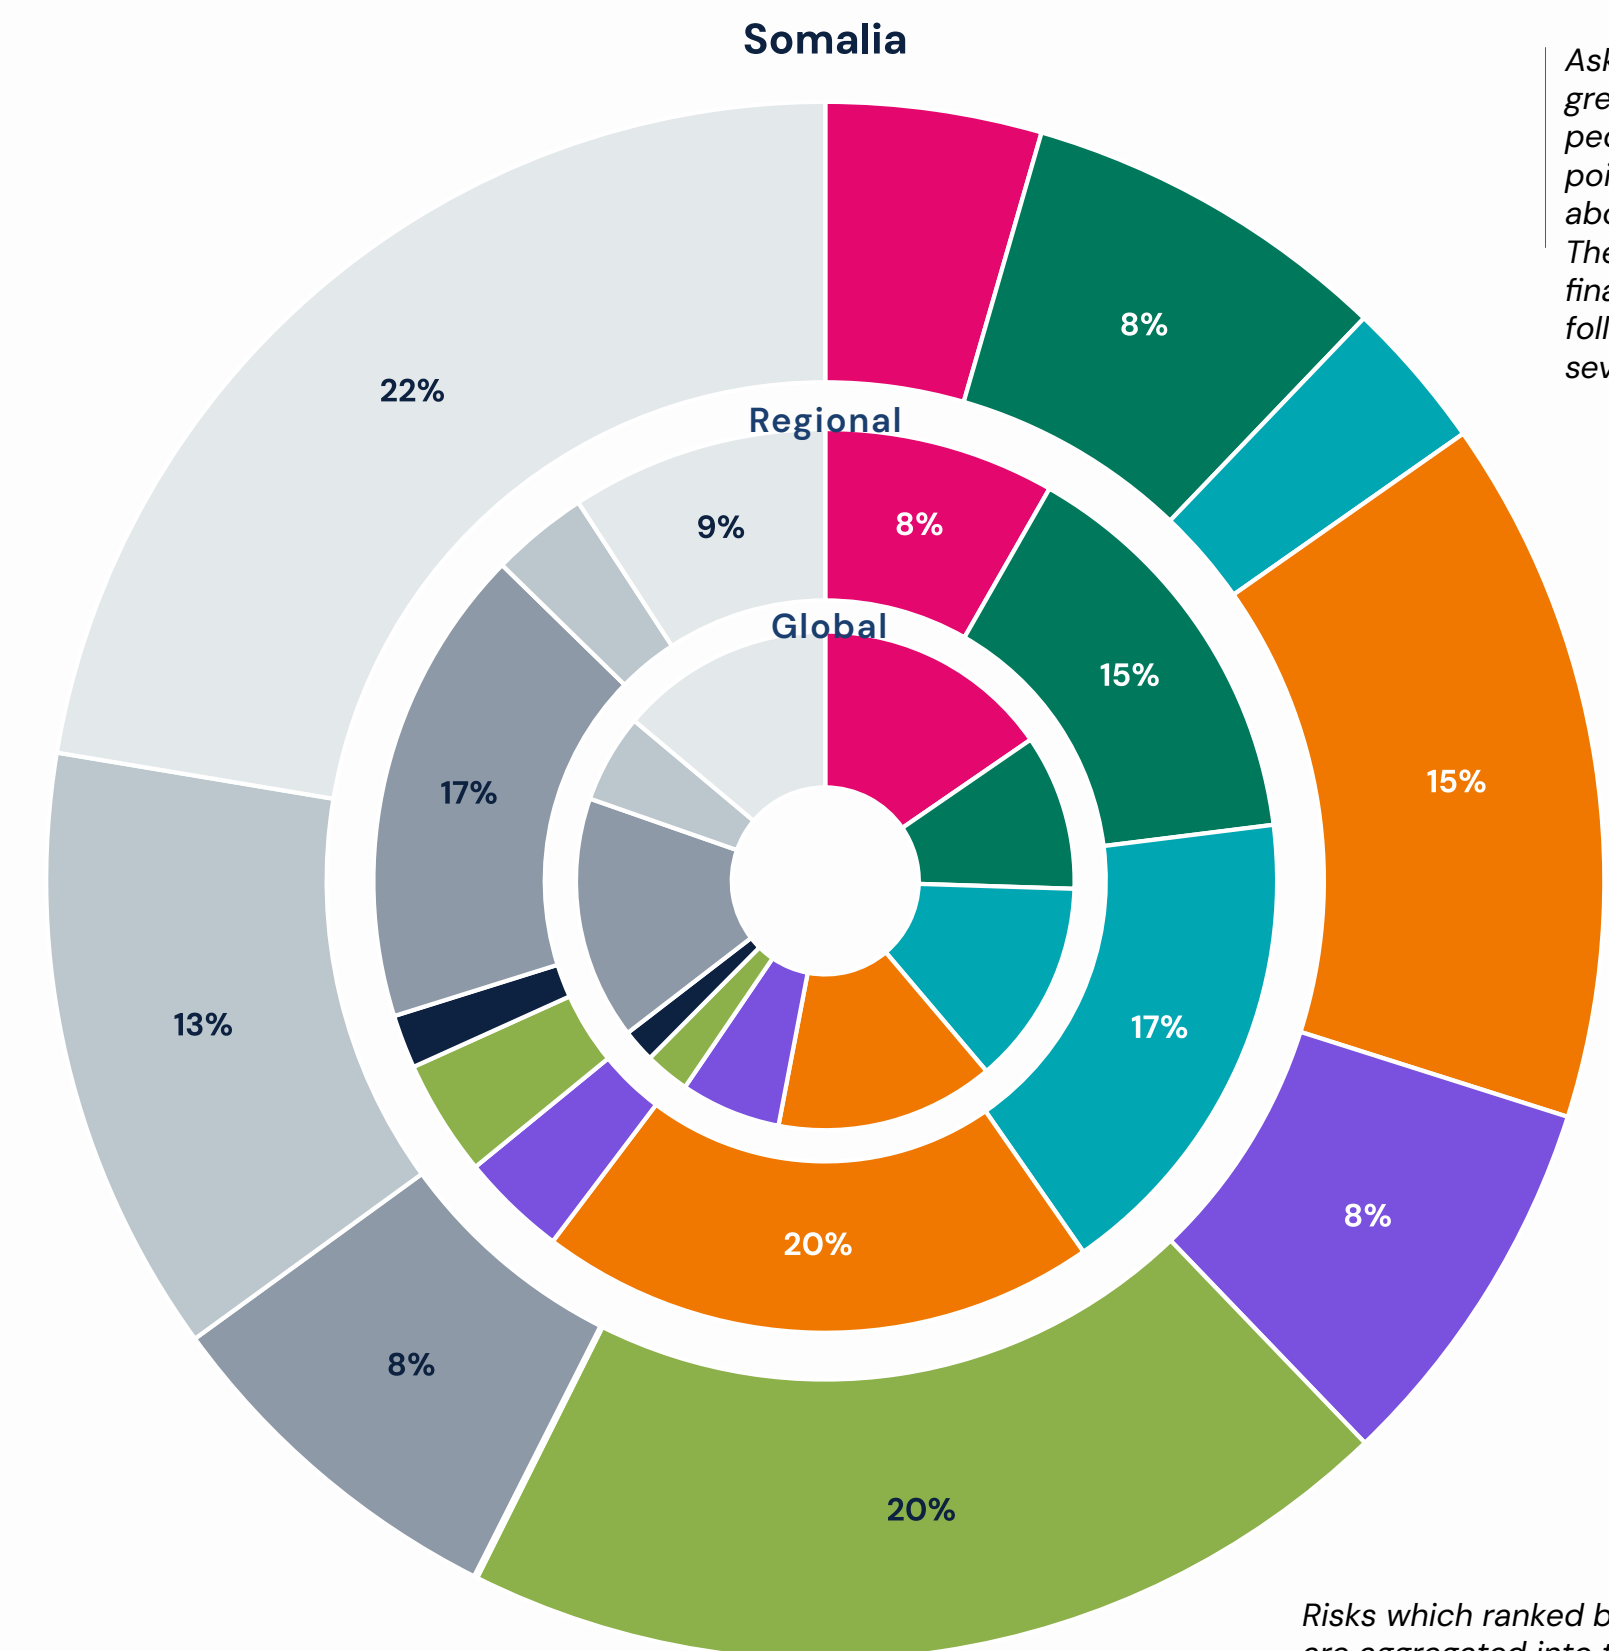

Dashed lines represent global average.
Dotted lines represent regional average.

People in Somalia are most worried about prolonged severe weather (65%) and the food they eat (57%) causing them serious harm, the two highest levels of concern among the ten risks asked about. Across all ten, worry in Somalia runs lower than the global average. Concern far outstrips lived experience, however: while 65% worry about prolonged severe weather, only 37% have actually been harmed by it in the past two years. The harm most commonly experienced in Somalia is prolonged severe weather (37%). The gap between worry and experience is widest for prolonged severe weather, where 65% are worried but 37% have actually been affected.
